BBP 1.0 out of 5 stars Much like Dracula, you will regret ever bringing this into your home. I own this washer and it is one of the poorest designs Ive ever seen. The rubber seal around the door traps in water and allows mildew to grow. To minimize the risk of this happening, you will have to leave the door open when not in use. The door locking mechanism is also a major point of failure. A safety locking sensor is mounted directly behind the metal housing, aligned to mate with a hook on the door. All thats keeping it in place is a small plastic tab. Ours broke off and now the sensor wont stay where it should be, preventing the washer from operating. With careful maneuvering, were able to wedge the sensor back into place, then hold the door handle and carefully insert the hook into the hole, but this is quite bothersome. Do not buy this piece of junk, or the matching dryer. You will have nothing but headaches. We have had our BOSCH washer for 4 years. The door locked up as I was starting a load. Made a terrible noise. It does not come with a manual and guess what you can look HIGH and LOW but you will not find one that you can beg, borrow or steal from anyone. We cannot find anyone who wants to work on it. My husband is a Master Electrician and has torn this thing completely apart with the help of an online Technician Bosch website. Do you know how hard it is to communicate with someone via sporadic messages back and forth. We have no way of figuring out what or if any of the lights the are flashing really mean anything in the way of saying this is the

error.<http://gespk.com/userfiles/canon-sx400-manual.xml>

The online tech told us that the circuit board was burnt up based on the testing he had my husband complete. Still no action with the machine. So he says now maybe the motor is burnt up but not sure. So are we just suppose to order a new motor and God only knows what that will cost and if it is really the problem. There is also NO Way you are putting 15 pair of pants in this machine at one time unless it is 15 pair of underpants. Stay away from BOSCH!!! This is the experience I have had with the Bosch appliances. It is a vented dryer, not the condensation model. This review is mostly about the dryer. Pros Stylish witch makes no difference since the dryer is so poor Cons This dryer takes very long to dry even small loads. It will get warm but not hot. A Bosch technician measured the temperature of the dryer at 122 degrees Fahrenheit. But, he informed me that this was normal for this dryer. In one test; two bath towels, two hand towels, and one facial towel were washed in the washer and rinsed on maximum spin to remove as much of the water as possible. It took the dryer 1hr. 20 min. to dry the load. After many phone calls and 3 or 4 service calls, they replaced the dryer. It performed as poorly as the first. So, I called an electrician to really find out what was going on. With freshly washed towels in the dryer, he observed the dryer drawing 10 amps about the maximum rating for 15 to 20 seconds. Then it went down to 5 amps for about about 30 seconds he described it as half heat then down to room temperature air coming out of the exhaust for another couple minutes. It repeats this cycle. At no time does the dryer actually get hot enough to remove the moisture from the load. It mostly just uses ambient temperature air to dry the clothes. If touch the clothes in the middle of the load, they mearly feel slightly warm. While it is not practical for most people to use a clothes line, I think it would be just as effective as this dryer.

The thing that bugs me the most about this whole debacle is this Both Bosch and the appliance store had the attitude that I should just accept the poor performance because it is a European design. I heard many excuses defending an appliance that I truly believe they KNOW does not perform as it should. If you buy a coffee maker, do you expect it to make coffee in about 15 minutes. If you buy a blender, do you expect it to blend what you put in it. Well, when you buy a DRYER, you kind of expect it to actively dry. You can expect a small load to take 60 minutes to wash and 80 minutes to dry. So you are right around 3.5 to 4 hours for two small loads. Update The appliance store has taken back the Bosch washer and dryer. I hope this review is helpful for you. We paid big money for the set and it cleans and dries our cloths like crap; their customer service SUCKS also. The moldy smell that comes from the washing machine is just terrible. It also shakes and moves all over the place. It is supposedly Energy Efficient, but we have to often times wash our cloths twice to get them clean and we run the dryer through three or more cycles. It does not deserve the star I am required to give it. Please refer to product details and specifications when making a final selection for purchase. Their machines are so advanced that its the most energy efficient in America, using 76% less water and almost 72% less energy then conventional toploading machines. It offers superior cleaning results and quieter operation. Bosch washers and dryers is the best youll ever own do to the powerful combination of efficiency, performance, value and engineering. Axxis Laundry Systems expertly cleans and cares for your clothes while saving over 12,000 gallons of water and hundreds of hours of energy usage each year. This statistic is based on DOE test procedure of 392 loads per year and AHAM clothes washers Energy Efficiency and Consumption trends and 2000 Water Consumption.

For added convenience, the washer and dryer combo can be placed side by side or stacked on top of each other. Boschs exclusive horizontal Axis wash system gets clothes unbelievable clean. They have double the spin speed of conventional washers. Clothes emerge needing less drying time, sparing them from the damage of excessive heat or overdrying. Combined with its remarkable water efficiency, it adds up to hundreds of dollars in savings per year. Actual delivery times will vary based on your location. Learn about our response to Covid19 Disconnect involved removing back cover around lock and electrical connector. Also had to remove rubber gasket. So I called the place I bought the machine from. They have no service department, sales only. But they gave me their distributor. Called them and managed to get the genuine part number. Then came back online to find the door seal. At this point AppliancePartsPro was good. Same part number as the manufacturer, and about 15% cheaper than the distributor, so I bought it. Arrived quickly and was an exact replacement. I went to youtube to find an instructional video. Could have reasoned my way through without it, but it was good to have some initial guidance. I had to remove the machine from the closet to fully open the door to access the hinge mounting screws. Unfortunately there were no debris. Tried to run drain mode with door open.

Could hear pump making noise but the impeller wasn't rotating. New pump didn't fit on old housing so I had to remove both the rear panel and the front bottom panel. Kit came with new attachment screws and new housing. Everything fit fine. Washer actually runs faster than before. Apparently the pump had been struggling for a while and was taking multiple spin cycles to drain a regular load. I found this unnecessary just awkward doing all the work laying down. You will need a torx bit to remove back panel and install new pump. You will need a Phillips bit to remove old pump and front panel. You will need pliers to remove and replace the drain hose clamp. A flashlight is handy. I really recommend the appliancepartspro.com, the delivery was so fast 1 day.
